

## Sharing images at a Photo Guild event

You may share one, two or three images at the Photo Guild meeting. The directions below will adjust your images to best load and display for sharing.

1. set the image ppi (pixels per inch) or dpi (dots per inch) at 96 (this should be done first in Photoshop)
2. set the longest side of your image at 1024 pixels
3. set (or check) the color is sRGB
4. create a folder on a memory stick or thumb drive with your name
5. place your image(s) in the folder you have created
6. when you arrive at the meeting, take your drive to Jack to be loaded for the program

If you need help or have any questions, email Jack at [ljlrenner@mac.com](mailto:ljlrenner@mac.com)
